SUN SHADE

Josko offers many components for harmonious living and smart building from a single source: Windows, all-glass systems, entrance doors, interior doors, natural wood flooring and sun shade. Builders thereby ensure that all elements fit together, that a coherent overall picture emerges and that they get exactly the combination of products that best suit their dream home.

Everything from a single **source** for your unique home

WONDERFULLY JOSKO

WINDOWS

3 styles. 3 materials. 16 window systems. With Josko windows, no living dreams remain unfulfilled.

ALL-GLASS SYSTEM

4 all-glass systems in 3 materials bring openness to our lives and expand the living horizon.

ENTRANCE DOORS

In 4 materials and over 100 models, Josko entrance doors ensure that we look forward to coming home.

COMPLETE OFFER

INTERIOR DOORS

Josko interior doors are available in a wide variety of frame variants - from modern, flush to classically rebated.

NATURAL WOOD FLOORING BY TRAPA

High-quality natural wood floors manufactured according to ecological principles and harmoniously matched to all Josko products.

SUN SHADE

Elegant, integrative sun shade solution such as Josko Venetian blinds and Josko roller shutters cool during the day and protect at night.

COMPLETE OFFER

A mix that always succeeds.

SMART DESIGN FROM A SINGLE SOURCE.

The best ideas are often quite simple. Because wouldn't it be an excellent idea if all of the elements in your personal living environment fit perfectly together? That's exactly what we thought. That's why we developed the Smart Mix Philosophy: the Smart Mix gives you the option of harmoniously coordinating all the visually defining elements of a living space: from the windows to the entrance and interior doors, from the natural wood floors to the smallest details. With the Smart Mix, material and design always fit together perfectly – and ensure a harmonious living atmosphere that exactly meets your needs.

COMBINE AND BENEFIT

The Josko Smart Mix offers you e.g. the option to mix different window and all-glass systems made from different materials: Outside in a uniform look for a calm façade and inside as creative as you like. For example, you can use high-quality wood/aluminium windows in the living area, and cheaper pvc/aluminium windows in the bathroom and basement,

all harmoniously matched to entrance and interior doors and perfectly complemented with the matching Josko natural wood floor. The result is the optimal individual solution for you, combined with smart budget planning. Because the Josko Smart Mix means combining and benefiting at the same time: with a home design that matches your personal wishes as consistently as your financial expectations.

RESIDENTIAL HARMONIOUS LIVING FROM A SINGLE SOURCE

Another advantage of the Josko Smart Mix: Everything comes from one source and is consistently matched in design, symmetry, colour and material. This way you save time and money on combining and do not have to worry about matching products from different manufacturers. The clever Smart-Mix philosophy ensures that all elements match perfectly - so that you have more time for new ideas.

Nature

Pearl Grey

We live wood in every fibre.

The way carefully selected wood is combined to create a healthy living harmony at Josko is a declaration of love to Mother Nature. From trunks, from amazement, from having to being. Wood. Timeless vibrancy. At first only roughly cut, then carefully stored and dried, carefully treated with respect by our experts in each individual work step.

No perfect end product without the best raw materials. Who saves on wood, saves in the wrong place. That's what our decades of experience has shown. Our guests in Kopfing are amazed when we tell them that our German walnut, oak, spruce, and larch woods come from sustainable forestry and from controlled, certified Central European forests, and we also tell them that for every felled Oregon in Canada, three new trees are planted.

It is not surprising that Josko has been the market leader for wood/aluminium windows in Austria for over 20 years.

That Josko, as a window and door manufacturer, is also proudly in 3rd place for interior doors in Austria however is surprising. We know how much the veneer quality from solid wood determines the value of the door leaves. However, only a few know that, where possible, all doors in a house are made from one trunk in order to create the purest harmony in the home.

And then there's the Smart Mix at Josko. Introduced in 2000 with regard to the material-independent design of the exterior façade and expanded in 2014 with the uniform design of many wood colours in the interior. Oiled and brushed according to the Josko process, windows, entrance doors, interior doors and natural wood floors are kept in the same colour and radiate a harmonious ensemble.

Spruce, oak, larch and German walnut come exclusively from **Central Europe**.

Solid wood veneer quality determines the high quality of the interior doors. On request, all doors in the house can be made from a single trunk.

20
Years

20 years market leader for wood/aluminium windows in Austria and No. 4 on the German market.

Responsibility for the future

**BECAUSE SUSTAINABLE PRODUCTION
ALSO MEANS RESOURCE-EFFICIENT
PRODUCTION.**

All **residual materials** in the manufacturing process are recycled so that they can be recycled or returned to the production cycle. Anything that cannot be used ends up in our in-house biomass power plant and supplies us with energy.

Resource-friendly production, **100% in Austria** with continuous investments in environmental protection and sustainability.

All woods used come from **sustainable and certified forestry**.

COSY & EFFICIENT: RENOVATE WITH JOSKO

Renovation and thus the intervention in the existing building fabric is a big step that needs to be carefully considered. The question often arises: Is renovation really worth it?

The answer to this is a resounding yes - provided that a solid renovation concept is worked out in advance. Based on the renovation concept, your Josko partner will find the right solution for the renovation of windows and doors, because that's where approx. 25% of a house's heat loss comes from: Renovation with

thermally optimal Josko products can save up to 95% in heating costs!

Renovating offers decisive advantages

By the way, with Josko you not only decide on the best energetic solution, but also make the right choice in terms of design - with a substantial gain in living and quality of life and a huge increase in value for your house! Because the desire for brightness, transparency and lightness of the feeling of space has never been greater than in our time.

FOUR QUESTIONS: HOW IMPORTANT ARE THE WINDOWS? THAT'S WHAT REALLY MATTERS.

1. Is it also important to change windows when insulating façades?

Absolutely! The windows are thermally the weakest point in the house, the heat loss can be up to 25%! If the old windows remain in the new façade, the energy saving effect is severely impaired.

2. Can new windows be »too tight«?

By no means! Windows and façades must form as tight a unit as possible, the air exchange takes place via regular, controlled ventilation. Josko products meet the requirements of the highest tightness classes.

3. How important is sun shade for new windows?

Very important! As significant as the solar energy gain in large glass areas is in winter, this effect is dangerous in summer. Sun protection solutions are ideal, as they let as much light as possible through, but shield the heat.

4. What is the advantage of triple instead of double glasses?

Triple glasses provide a cozy feeling of well-being because they radiate much less cold. With the right orientation and dimensions, they can gain more energy than they lose over the year.

Free manufacturer's guarantee for quality installation

We are happy to be part of your dream home. Because we know that this is a life decision, your satisfaction is a very important for us. No matter whether high-quality windows, entrance or interior doors, all-glass systems, natural wood floors, sun shade solutions or a smart product mix - our aim is your complete satisfaction. From the initial consultation to the final installation and beyond. Since we believe 100% in our products and our

partners, we are the only international brand manufacturer to promise you satisfactory installation. This promise makes Josko a manufacturer with installation satisfaction. In a nutshell: If you have the installation of your Josko products done by one of our official partners, we as the manufacturer guarantee quality installation. Only Joskomplett's promise of satisfaction offers you this safety net.

- 1

Simply contact your Josko sales or installation partner.
- 2

If the latter is unable to remedy the existing defects, please contact Josko customer service directly.
- 3

Have the following documents ready:
 - Installation contract
 - Insulation invoices including payment documents
 - Your correspondence with the Josko sales or installation partner and their acceptance reports
- 4

Josko takes care of checking and processing the guarantee case.

FULL SATISFACTION IN 4 SIMPLE STEPS

Unfortunately, even if our installation partners are comprehensively trained, defects can never be completely ruled out. But for exactly these rare cases there is Joskomplett, our free manufacturer guarantee. If you notice a defect, our experts will guide you through the entire remedial process.

ATTENTION TO DETAIL.
THIS IS WHAT MAKES
JOSKO'S WINDOW
SYSTEMS SO EXCEPTIONAL.

SOUND INSULATION

The following applies here: the tighter the better, because the sealing of the window has a significant influence on sound insulation. As standard, Josko windows are equipped with triple glazing and 3 seals and thus achieve up to 47 dB sound insulation.

TILT WINDOW WITH COMFORT CLEANING

Horizontal windows can now be easily cleaned on the outside. This is ensured by the TiltFirst safety handle, which can also be used to open the window for normal tilting at an angle of 30 °.

BASIC BURGLARY PROTECTION AS STANDARD

As standard, Josko windows have a mushroom pin lock that prevents the sash from being pried open. For even more security: Quadro Safe, SH-1 and RC2 optionally available.

HIGH-TECH GLASS SPACER

Thanks to the composite material of black plastic and stainless steel, the Twinspacer creates a significant thermal improvement compared to conventional stainless steel spacers.

SIMPLE FORM

The concealed fitting gives the window its slim design and keeps the open window in the desired angle due to the integrated turn restrictor.

When **two**
worlds become a
way of life.

WONDERFULLY JOSKO

“Elegance, high quality material, professional installation of the products - this is what distinguishes Josko.

ANJA KLEINHANS

The frameless all-glass architecture impresses with its precision and together with the FixFrame system from Josko offers a unique freedom of design without having to compromise on structure, tightness and thermal insulation.

TIP

Plan the sun shade for large glass surfaces right from the start. Then make sure that the sun shade elements fit the windows perfectly and that the temperatures remain pleasantly cool even in the summer months.

The interplay between inside and outside is a central element of the architecture of this single-family house. The combination of living space and nature is perfected in Josko systems. Keeping the inside and outside flowing - an architectural challenge that the Kleinhans family, in collaboration with the architectural firm Gassner & Zarecky, confidently took on when planning their detached family home near Munich. In order to create an interface between the natural landscape and modern architecture, the conventional was courageously pushed aside. The FixFrame all-glass system from Josko does the rest and underscores the consistently progressive design. The seamless combination with opening sashes such as windows and patio and entrance doors or lift-and-slide doors perfects the coherent overall picture. "Finding the right window solution played a crucial role in the planning from the start. It should be frameless, be as little bulky as possible and allow a thresholdless exit to the outside. With the FixFrame system from Josko, these wishes could be realized," emphasizes builder and interior designer Anja Kleinhans. For a uniform picture and a balancing living harmony, the flush-fitting wood/aluminium windows in platinum were chosen in matt black on the inside and outside. "For this reason, the entrance door and side doors in the outdoor area should have the same de-

The harmonious overall statement of architecture and interior creates a seemingly natural connection between inside and outside in the light-flooded living room of the Kleinhans family. The FixFrame all-glass system by Josko mediates between the two worlds, and its understated elegance underscores the high design standards of the building.

sign and the same surface." We opted for the Well Come Nevos aluminium security door, which was awarded the EnergieGenie, with exemplary thermal and sound insulation values. The floor-to-ceiling white doors and sliding doors of the MET series are the equivalent inside. Thanks to the revolutionary wall-fitting frame system, these blend optically with the wall. "It was also important in the sense of the coherent overall concept for the door handles to be realized in the colour of the door and also have the same shape as the window handles if possible. Josko was able to offer these details, which are important to me," says the owner enthusiastically about the broad product range. The gigantic window front is completed by the Easy Raffstore sun protection system, which, with its infinitely adjustable slats, ensures efficient shading with every incidence of light. Design requirements and a feel-good factor should not be mutually exclusive. Good design invites you to relax," says Anja Kleinhans, thereby also confirming Josko's philosophy. After all, that's what it's all about when you create a home. A place that provides security and comfort. Today, tomorrow and in the future.

WONDERFULLY JOSKO

AVANTGARDE

When every day starts with astonishment and the eye can never see enough. When openness inspires our lives.
When the high demands are exceeded and we fall in love with innovative design at first glance.
Then this is: Beautiful Josko. With exceptional windows and all-glass systems that expand the living horizon.

AVANTGARDE WINDOW SYSTEMS

World premier **ONE** by Josko

ONE SYSTEM, ONE DESIGN.

One family, one unit.

ONE by Josko is an independent product family developed by Josko, with windows, various opening types and functions - such as fixed parts, turn-tilt windows and sliding doors - with a uniformly narrow frame look of only 5 cm - on all four sides, outside and inside. Perfectly combinable with the frameless FixFrame system from Josko.

ONE by Josko is available in two versions: In aluminium as well as an App version with surface applications in various materials, which are exceptional for window construction. Externally, both variants are completely identical and can thus be installed together on one property.

Videolink at www.josko.at/vision

ONE
by JOSKO

Photos: Florian Stöllinger

ONE by Josko **complete system**

EVERYTHING FITS TOGETHER.

ONE by Josko is perfectly matched. A design family where everything belongs together. Windows, doors, frames, handles - yes, even the subtle insect screen and sun protection fits in harmoniously.

ONE App **patio door** with matching Josko natural wood floor, both in oak silver grey N06.

ONE window with turn-tilt function

FixFrame ONE S **sliding door** frameless with easy Venetian blind.

Skirting board with flush wall termination

Window handle ONE FE with rectangular rosette

MINIMALISTICALLY SLIM.

ONE is unlike any other window and sliding door system. ONE combines the narrow and elegant window frames of earlier epochs with the technical achievements of the modern. With its innovative concept, ONE inspires the experts and advances to the forefront of today's window technology.

There was a time when window frames were slim and the windows were subordinate to the façade. Then came the insulating glass age with ever better thermal insulation ratings, ever thicker glass packages - and ever wider window frames. Today begins a new era with ONE by Josko. ONE has brought back the slim elegance of the windows: with modern triple glazing and thermal insulation ratings, which are suitable for passive homes - but with the minimal frame view

of earlier architectural epochs. This is the end of the period when the design of windows and doors had to subordinate to the function and the frame widths of windows, sliding doors and fixed parts were different. ONE by Josko means: A uniform, slim design of windows, sliding doors, fixed parts and insect screen, regardless of the type of opening.

ONE
by JOSKO

ONE app turn-tilt sash with sidelights

Sliding door FixFrame ONE App S frameless

Photos: Florian Stöllinger

*Barely 3 fingers wide -
5 cm visible wing width*

LESS IS MORE.

**Barely 3 fingers wide -
only 5 cm visible wing width.**

A novel window and sliding door system with extremely narrow frame: only 5 cm - on all four sides and in all elements. ONE by Josko convinces with a purist design reduced to the essentials: less is more.

ONE
by josko

UNCOMPROMISINGLY SYMMETRICAL.

Why windows have never been symmetrical until now.
Have you ever noticed that windows in the view are always asymmetrical? Almost all windows and doors are plastered on the side and top - but not below. The more plastered - keyword: narrow frame widths - the larger the difference and thus the asymmetry.

ONE by Josko: **The rebirth** **of symmetry.**

ONE has solved this problem.
The interior looks like a picture frame - the same width all around and symmetrical.

This perfect symmetry can also be found in the external view, provided you opt for the specially designed window sill designed for this purpose.

ONE is always symmetrical.

1. All-round symmetry

From inside and outside.
Top, bottom, left, right.

2. Symmetry with multi-part elements

And different opening type.

3. Deep symmetry

No depth change of the glass levels, as the glass pane is centred on all elements.

ALL-ROUND SYMMETRY.

1

A WINDOWSILL WITH A SENSE OF SYMMETRY.

The beauty of the symmetry of ONE with the design window ALU DS2 fascinates at first glance. The design window not only preserves ONE's all-round, equally slim frame look, but also highlights the symmetry.

Cleverly thought-out, it is an integral part of the window. Both form a coherent unity - a symmetrical overall composition of timelessly simple elegance.

ONE in comparison.

All-round symmetrical view on all 4 sides.

ONE by Josko

- Only 5 cm frame view width, barely 3 fingers wide
- Symmetrical on all four sides

Conventional window

- With dominant broad frame
- Not symmetrical: The more floor plastered, the more asymmetrical the view. The window frame remains wide at the bottom.

2

SYMMETRY WITH MULTIPARTED ELEMENTS.

Symmetrical picture frame optics even with multi-part elements.

The continuous, slim symmetry of ONE is also evident in multi-part window and door elements. The view width of the middle section is only 11 cm - just over a hand's width. The picture frame optics typical for ONE are preserved: The dividing joint is exactly in the middle.

Each wing with different functions (such as tilt-turn window and fixed parts) is completely symmetrical and can be arranged side by side or on top of each other. The slim and all-round symmetrical frame look always stays the same. From inside and outside. One system, one look.

ONE in comparison. Fixed part and turn-tilt wing in one design.

ONE by Josko

- Fixed part and openable part with the same frame width and the same glass - inside and outside

Conventional window

- Fixed part and openable part are in no respect symmetrical

Symmetrical picture frame optics even with multi-part elements.

Unlike conventional windows, ONE does not allow the glass planes to intersect between openable and fixed parts. In addition, ONE has only a very small recess to the glass outside and inside. An aesthetic solution across the board.

3

DEEP SYMMETRY

www.josko.one

Sliding door *FixFrame ONE App S* frameless

MAXIMUM FREEDOM IN CHOICE OF MATERIAL

ONE App: The freedom in choice of material and style.

For decades, you could choose only between wood, plastic or aluminium for windows. With ONE App, new opportunities are opening up. ONE's revolutionary App technology delights with beautiful surface applications for maximum impact.

First the window, then the App.

ONE App also offers quite practical benefits: Thus, the decision for the individual indoor application is also possible upon request only after installing the windows. Damage to the application due to dirt, building moisture and construction work is avoided. The App is only applied at the end.

ONE in comparison. Interior view of the turn-tilt window.

ONE App
Inside with maximum freedom of materials

Conventional aluminium window
Inside only available in aluminium

Sliding door ONE app real steel

New innovative materials.

In addition to the elegant and tried-and-tested wood surfaces from Josko in wild oak, oak, spruce, larch and Oregon, walnut, synthetic concrete, glass, brushed aluminium and real ones are also available with ONE App Steel possible.

This allows ONE App to perfectly match almost every living style- tailored for each living room, matching the respective architecture. For those seeking the exceptional.

WONDERFULLY JOSKO

MODERN

When the natural sense of living has no limits and the transitions between outside and inside are fluid.
When nature always surrounds us and we can really relax where all the senses feel good.
When we can experience the freedom of our own four walls in their most beautiful form. Then this is: Beautiful Josko.
With windows and all-glass systems that can be combined in many ways.

MODERN WINDOW SYSTEMS

Exceptionally beautiful windows.

Modern
flush

FLUSH FINISH
Josko design windows are flush with the glass and frame on the outside.

EASY TO CLEAN
The flush with the glass panel ensures quick cleanliness.

TIP

BUILD ON A BUDGET
Design windows from Josko have one thing in common: the uniform aluminium shell, which is highly weather-resistant. It makes it possible for wood/aluminium and plastic/aluminium to be combined in one house.

MODERN WINDOWS, LIFT AND SLIDE DOORS AND ALL-GLASS SYSTEMS

MORE LIGHT
The slightly sloping shape of the window frame allows more light into the house.

TIP

The modern windows are available in many lacquered, glazed, oiled and hand-oiled wood colours.

SIMPLE FORM
The concealed fitting gives the window its slim design and keeps the open window in the desired angle due to the integrated turn restrictor.

3 Fenster
Systems.
One Look.

SMART MIX

3 window systems. One look outside.
Inside wood or plastic.

Platin

WOOD/ALUMINIUM-WINDOWS

flush

PLATIN

Best value:
U_w 0.74 W/m²K
System depth: 82 mm

PLATIN PLUS

Best value:
U_w 0.71 W/m²K
System depth: 103 mm

FLUSH ON 3 SIDES

The Platin family is not only flush-fitting to glass and frame on the outside but also flush-fitting to the frame on the inside for an even slimmer look.

EXCELLENT SUSTAINABILITY

The Minergie Award confirms that our platinum window has particularly good properties in terms of thermal insulation, tightness and sound insulation, while at the same time offering good value for money.

Platin

MORE LIGHT

Thanks to the bevelled shape, the frames look even slimmer and allow more light into the room. This is particularly advantageous for double or multi-leaf windows.

REBATE JOINT

The alternating rebate for floor glazing Platin and Platin Plus is milled from one part. The inserted bar can be omitted.

Josko design

Standard design

TOO BEAUTIFUL TO BE TRUE?

No. The unique gluing allows the natural grain of the wood to appear without interruption. The industry-standard laminated timber look with its colour and structural differences are eliminated.

ATTENTION TO DETAIL

The platinum success window from Josko has been providing more light with its unique frame shape since 2008. The standard triple glazing with optimal sound insulation and the processing from sustainable wood make the trendsetter on the window market even more energy efficient.

Architect: VINI SIXTUS, architect Mag.arch. Vinzenz Naderer, photos: Andreas Hofer

PLATIN BLUE HS

The Platin Blue lift-and-slide door catches the eye with its simple, slim frames and flush glass look. As a wood/aluminium door, it offers the cosiness of wood on the inside and the resistance of aluminium on the outside. The door can be coupled in many ways and can perfectly be combined with the fixed element Blue.

PATIO DOOR

Patio door Platin inside, oak N03 natural

TIP

LARGE DIMENSIONS
Patio doors available up to a maximum height of 3 metres.

PLATINUM PATIO DOOR

The Platin Blue lift-and-slide door catches the eye with its simple, slim frames and flush glass look.

60

LIFT&SLIDE DOOR

HARMONISES WITH MANY SYSTEMS.

It perfectly matches with the all-glass system Platin Blue, with the Platin window series and all of Josko's modern window- and all-glass systems.

REDUCED COLD RADIATION.

The triple glazing and the frame made of solid wood reduce the cold radiation.

UG 0.5 AS STANDARD

Platin Blue by Josko is produced with triple glazing Ug 0.5 as standard (compared to competitors who often provide Ug 0.6).

BARRIER-FREE THRESHOLD

Without tripping hazard, on request with a system-integrable insect screen sliding frame in the threshold.

SLIM GUIDE RAIL

Aesthetics in every detail of Josko products. The upper guide rail is slim and elegant.

BARRIER-FREE THRESHOLD

The Isostep threshold has an especially high heat insulation due to the GRP fibre reinforced PVC and is also designed with a high resistance to driving rain. New! Available in many different colours.

SWIVEL MOUNTED PULL HANDLE FOR PATIO DOORS

Functional and aesthetic - the swivel-mounted pull handle designed by Josko. So slim and flat that it easily fits under an insect screen sliding frame.

BEAUTIFUL STAINLESS STEEL HINGES

Exclusively for wood/aluminium patio doors: beautiful stainless steel hinges for heavy and high door leaves. New! also available in black.

61

FixFrame Platin

FRAMELESS
ALL-GLASS
ARCHITECTURE
THAT SETS
STANDARDS.

MANY INNOVATIVE ADVANTAGES:

DRAINAGE CHANNEL

To drain large volumes of water quickly and reliably. Functional and beautiful.

CONCEALED CABLE ANCHORING & SLIDING INSECT SCREEN

Running upwards the first time and thus ensuring a simple look.

SUITABLE FOR PASSIVE HOUSE

Best value with triple glass
 $U_g 0.5 U_w 0.58 \text{ W/m}^2 \text{ K}$
Depending on the glazing chosen, it is suitable for low energy, or passive and energy-plus houses.

FIRE PROTECTION

Fixed part optionally fire protection certified.

BARRIER-FREE THRESHOLD

With a simple structure.
New! Available in many different colours.

TIP

DESIGN WINDOW SILL

Exclusive to Josko, The innovative window sill without visible fastening screws is significantly lower than others. This does not detract from the tightness.

For comparison:
a traditional window sill

EASY TO REPAIR

Glass replacement is easier than with other systems.

INDIVIDUAL SPECIAL SHAPES

such as bevels, step glass and corners are possible.

Platin Blue

SLIM GLASS ARCHITECTURE FOR OPEN, BRIGHT LIVING.

The second all-glass system by Josko: Platin Blue. Impressively slim frames – aluminium on the outside, wood on the inside – enhance modern architecture. With an equally attractive price-performance ratio. Platin Blue comes ready-to-fit, which makes it pleasantly simple to handle and assemble: the perfect solution for both new builds and renovations. Style-lovers can choose from a seamless

connection with all-glass joints, classic wooden frames or slim aluminium profiles. The Platin Blue range features many ready-to-fit elements (Platin window, Platin Plus, Platin Blue lift-and-slide door, Platin patio door and Nevos Alu SET entrance door).

MANY INNOVATIVE ADVANTAGES:

ALL-GLASS JOINT

All-glass joints are a high-end solution. They can be joined on their long side or around a corner. Choose between aluminium cover or high-quality enamel edge without aluminium cover.

BARRIER-FREE THRESHOLD

No tripping hazard and a front-mounted insectscreen can be installed if desired.

EXTREMELY SLIM FRAMES

This ensures maximum glazing, transparency and light, with optimum thermal insulation.

EASY TO REPLACE THE GLASS

In case of breakage, the glass can be replaced from outside.

COUPLING WITH STATIC PILASTER

A static pilaster ensures good support and looks like an all-glass joint from outside.

FLUSH ELEMENTS

Window and patio door are flush fitting in- and outside.

Safir

PVC/ALUMINIUM WINDOW

Modern
flush

PERFECTLY SHAPED
The glass-bead free sash not only looks beautiful, it is also effortless to keep clean.

DEMANDING DETAILS

The bevelled wing shape allows more light into the room and ensures a slim look. At the same time, the slope improves the air circulation and heat flow at the window and thus reduces the formation of condensation on the window.

TIP

When buying a window, make sure that the plastic is free of lead and cadmium. This has been standard at Josko for years.

COUPLING

Stable, narrow couplings and mullions paired with extremely slim pilaster strips for high structural requirements.

NEW! BEAUTIFUL CORNER CONNECTIONS

Standard design joint. Instead of the usual U-shaped, wide and angular recessed corner connection joint, Josko PVC-windows are designed with a V-shaped, delicate and easy-to-clean design joint.

PATENTED PROFILE STRUCTURE

The innovative and patented profile structure additionally reinforces the frame and provides maximum heat values.

FLUSH ON 3 SIDES

The Safir family is not only flush-fitting to glass and frame on the outside but also flush-fitting to the frame on the inside for an even slimmer look.

EXCELLENT AND SHAPELY

Safir has been awarded the Red Dot Design Award and the German Design Award.

SAFIR PURE

Best value:
U_w 0.71 W/m²K
System depth: 100 mm

SAFIR PLUS

Best value:
U_w 0.67 W/m²K
System depth: 100 mm

LIFT&SLIDE DOOR

FLUSH-FITTING, RECESSED UPPER GUIDE RAILS
Unlike conventional PVC lift-and-slide doors, the technology behind the system is invisible, ensuring a slim, elegant look.

SLIM, FLUSH-FITTING DOOR LEAF DESIGN
A first for Josko: modern all-glass design in less expensive PVC material.

8 GUIDE ROLLERS. EASY TO USE.
Not the usual 4 but up to 8 rollers ensure an effortless operation of the 400 kg sash.

BARRIER-FREE THRESHOLD
No tripping hazard and you can even integrate a front-mounted sliding insect screen. New! Available in many different colours.

SAFIR BLUE HS

The impressively slim PVC lift-and-slide door Safir Blue. Together with the PVC/aluminium windows of the Safir and Topas series, the first PVC all-glass system from Josko is created. clearly a beautiful connection to the outdoors.

PATIO DOOR

PATIO DOOR SAFIR

In the PVC/aluminium window, Josko combines 4 qualities: a flush and slim design and warmth and stability. In addition, Safir offers more light due to the slim, bevelled and stable sash frame.

Patio door coupled with fixed part and extremely slim pilaster strip.

TIP
PATIO DOORS
Offer a maximum height of up to 2.70 meters

STRONG STRUCTURE SLIM DESIGN
Static pilaster strips ensure a reliable hold and stable couplings.

BARRIER-FREE THRESHOLD
The Isostep threshold has an especially high heat insulation due to the GRP fibre reinforced PVC and is also designed with a high resistance to driving rain. New! Available in many different colours.

Safir Blue

ELEGANT AND IMPRESSIVELY SLIM

Combined with existing PVC/aluminium windows in the Safir and Topas family, the new PVC/aluminium lift-and-slide door and slim fixed component form a new all-glass system: Safir Blue. The impressively slim appearance ensures maximum transparency at an affordable price. In addition to ONE, FixFrame and Platin Blue, Safir Blue is Josko's fourth all-glass system.

ELEGANT AND EFFICIENT

The almost frameless look ensures bright, open rooms and satisfies all the modern architectural requirements for creating a warm and cosy atmosphere – and all this in less costly PVC material. The interior design without glass beads and the flush exterior complement modern architecture and offer a pleasant feeling of well-being.

COMBINABLE

As with the Platin Blue wood/aluminium all-glass system, the slim frames are equipped with reassuringly weather resistant aluminium on the outside. This means that both systems can be combined in a single unit, which is not only architecturally innovative but also saves money.

MANY INNOVATIVE ADVANTAGES:

EXTREMELY SLIM FRAMES

Now also available in PVC. This ensures maximum glazing, transparency and light, with optimum thermal insulation. The frame is as slim as it is for the exclusive wood/aluminium model Platin Blue.

GLASS-BEAD FREE LOOK

Beauty is in what you don't see – such as glass strips and joints. The slim elevation with slanted frame also favours light incidence and solar energy production.

BARRIER-FREE THRESHOLD

No tripping hazard and a front-mounted insectscreen can be installed if desired. New! Available in many different colours.

SLIM, FLUSH-FITTING DOOR LEAF DESIGN

A first for Josko: modern all-glass design in less expensive PVC material.

Topas

PVC/ALUMINIUM WINDOW

Modern
flush

TIP

When buying a window, make sure that the plastic is free of lead and cadmium. This has been standard at Josko for years.

TOPAS & TOPAS PLUS

are the perfect options for beginners and are suitable also for slim budgets without having to compromise on the exterior look.

72

73

U_w 0.68 W/m²K
System depth: 84 mm

FLUSH FITTING

flush on 2 sides. Flush-fitting to glass and frame. Slightly rebated on the inside without glass beads - makes it easy to clean.

PATENTED STABILITY

In addition, reinforced, patented profile structure at an affordable price.

GLASS-BEAD FREE LOOK

Beauty is in what you don't see – such as glass strips and joints. The slim elevation with slanted frame also favours light incidence and solar energy production.

PATENTED PROFILE STRUCTURE

The innovative and patented profile structure additionally reinforces the frame and provides maximum heat values.

NEW! BEAUTIFUL CORNER CONNECTIONS

Standard design joint. Instead of the usual U-shaped, wide and angular recessed corner connection joint, Josko plastic windows are designed with a V-shaped, delicate and easy-to-clean design joint.

Photos: Roland Wimmer

PATIO DOOR

TOPAS PATIO DOOR

Beautiful and beautifully warm. Topas is flush on the outside, slim and perfectly fits the existing design window family.

An attractive design is combined with warmly recommended inner values. Above all, it has a top heat value that reduces heating bills and environmental pollution.

COUPLINGS

Stable, narrow couplings and mullions paired with extremely slim pilaster strips for high structural requirements.

BARRIER-FREE THRESHOLD

The Isostep threshold has an exceptionally good heat insulation due to its GRP fibre reinforced PVC and is designed for a high resistance to driving rain. **New!** Available in many different colours.

LARGE DIMENSIONS

Patio doors are available up to a maximum height of 2.7m. This height is possible due to an innovative positioning of an additional steel reinforcement in the profile.

TIP

PATIO DOORS

Offer a maximum height of up to 2.70 meters

Modern Classic

THE FLUSH-FITTING WINDOWS WITH GLAZING BARS

76

PLATIN CLASSIC

SAFIR CLASSIC

TOPAS CLASSIC

Modern
flush

Contemporary design with a special classic touch: From now on, our modern window systems Platin, Platin Plus, Safir Pure, Safir Plus, Topas, Topas Plus as well as the associated fixed part are optionally available with a 9 mm glass recess on the outside. This allows for an elegant combination with especially slim 25 mm

bars – ideal for current interior trends with classic comfort but also for example, for urban lofts with a special architectural character. Another innovation: Our modern windows are now optionally available with black PVC glazing bar spacers. These provide a reduced heat bridge compared to metal glazing bar spacers.

TIP

The Classic line by Josko skilfully combines the touch of urbanity with rural down-to-earthiness.

TIMELESS DESIGN

Those who want to live in a classic style rely on durability and understatement.

77

A STYLE OF LIVING WITH EVERLASTING VALIDITY

Is it the charm of the simplicity? Or is it the seductively new variant of an old flame? No matter why you choose the imperishable classic look - the lattice windows from Josko are a lifelong pleasure.

SLIM GLAZING BARS

25 mm slim and flush bars. Ideal for most modern demands with a desire for classic comfort.

GLAZING BARS FLUSHED & SLIM

Flush fitting to frame and with only 9 mm glass recess optically also almost flush fitting to glass.

When natural
comfort moves
in with the windows.

—
WONDERFULLY JOSKO

CLASSIC

When we long for rest in these fast-paced times. If we value natural comfort and cosiness is the standard we want to meet. Then, with its classic windows, Josko offers timeless design and a solid appearance, in which we feel comfortable in our home even after many years, just like on the first day.

CLASSIC WINDOW SYSTEMS

Comfortably beautiful **windows.**

Roller shutters

Interior Venetian blinds

Folding shutters

Sun shading by Josko.

Josko's elegant sun shading solutions provide plenty of shade during the day and ensure an even temperature inside the house while the sun shines brightly outside. In the evening, the roller- and folding shutters and interior and exterior Venetian blinds protect your privacy. They also prevent weathering and help save energy.

The sun protection solutions from Josko have been developed in-house and therefore match the window to the last detail, both in terms of design and technology. In particular, guide rails and insect protection solutions appear particularly simple and elegant.

SUN SHADING

Entrance doors

Nevos & Vitas

TWO SYSTEMS. MANY ADVANTAGES.

Flush-fitting, seamless door leaf design or traditional frame construction? Two series, one idea: to create a front door of such a high quality that fulfills all expectations.

For particularly high demands on stability, safety and thermal insulation - and in a breathtaking variety of designs from over 100 models. Made from high-quality solid wood with an additional HPL composite panel, as in Nevos, or with a traditional

frame construction, as in Vitas. Both series have warm, high-quality wood inside and can also be fitted with an aluminium covering outside to satisfy even higher requirements. Nevos and Vitas: entrance doors for life – made for generations.

Follow this link to the interactive 3D animations of Nevos & Vitas

CLASSIC

SYSTEM VET

REBATED WITH 60 MM OR 80 MM CLADDING

VET, the classic among the rebated frame systems from Josko.

In love with wood.

REAL WOOD VENEER

Josko relies on natural, real veneers and does not use wood plastic decorative films.

REAL WOOD EDGE

Patented folding edges made of solid wood protect the interior veneer doors and make them particularly durable.

ROBUST TOP LAYER

Josko only uses high-density fibreboard of particularly high quality for optimum robustness.

OIL SURFACE

The wood remains porous and reacts to the humidity. It therefore contributes to a healthy indoor climate and impresses with its natural grain and velvety feel.

VENEER SELECTION

Optionally, the individual veneer selection can be made in the Josko plant in Kopfing. We consider a surface pattern and simultaneous veneer reservation as a special service for our customers.

CLUDO MAGNETIC LOCK

Feather-light closing
The magnetic latch lock contributes to the well-being of its users, because it not only closes your door almost silently, but also particularly smoothly.

INSIDE DOOR CORE

The stable, sustainable flat core of the Josko interior doors with a door thickness of 40 mm ensures a long service life and good sound and heat insulation. With a door thickness of 56 mm, the door core made of lightweight board provides very high stability, especially for floor-to-ceiling door models.

FEEL THE REAL THING

Josko's interior doors open up an extraordinary world full of new design options. When simplicity never seems monotonous, but always elegant, and wood not only looks like wood, but we can feel and grasp the real thing.

SOFT CLOSE & STOP

The newly integrated Soft Close & Stop soft close damper, with damping function on both sides, ensures controlled opening and closing of Josko interior doors.

NATURAL MATT TOP LACQUER COAT

Natural matt top lacquer coat G5 has a velvety feel. Unlike varnishes used in standard with gloss level G40.

Aesthetic naturalness

INTERIOR DOORS BY JOSKO. AS BEAUTIFUL AS DESIGNER FURNITURE.

Josko's interior doors also maintain the sleek-look, especially with the MET flush-fitting door and frame system. The centrepiece of this door system is a special aluminium frame that can be plastered over or painted in the same colour as the wall to make it "invisible". The door leaf is completely flush with the wall and can, on request, be painted to blend in with the wall using latex wall paint.

THERE IS A LOT MORE TO WHITE THAT YOU THINK.

Spruce RAL 9016 white

Wild oak N09 white heaven

Larch N333 scandic white

AT JOSKO, WHITE IS NOT A COLOUR. IT'S AN INSPIRING WORLD FULL OF NEW LIVING IDEAS.

Did you know that white interior doors from Josko can also be genuine wooden doors? Even with our basic interior door variants, you have e.g. the choice between high-quality, high-density fibreboard in white lacquer or white lacquered beech. Other rock-solid woods such as spruce or ash are also popular

with our RAL-lacquered white interior doors. And since wood is often too beautiful to hide its surface, at Josko you can also choose oiled Smart Mix white tones such as White Heaven, Pearl White or Scandic White, which combine the colour white with beautiful real wood structures.

TIMELESS BEAUTY.
NEW INTER-
PRETATION.

LARGO NOW ALSO IN MET.

Modern architectural concepts are living the trend: all is permitted that pleases. Not only simple furniture is used but also pieces with a strong character. Josko moves with the trend and re-interprets the proven panel door Largo.

Thanks to a thicker door leaf construction of 56 mm the door can now be installed as MET door, flush-fitting to the wall. Well tried. Newly interpreted.

**PRADO V****FLUSH
FANLIGHT**

MET is a door system that has been consistently designed according to a minimalist design philosophy, for absolute flush with the wall and a impressively simple look. Of course, the new fanlights for MET are no exception.

New! Skirting board ONE in the same visible width as the app on the door frame

THE INTERIOR DOOR ONE 56 APP.

reddot award 2019
winner

The new interior door ONE 56 App fits harmoniously into the ONE product family. With ONE 56 App, it is possible for the first time to incorporate a wide range of materials in the interior door frames: Glass, concrete, steel, or different types of wood, harmoniously matched to the

natural wood floor. ONE 56 App consistently pursues the symmetry of the product family - even with the interior door, the frame is always only 5 cm or three fingers wide. And even the skirting board can optionally be matched to the frame.

Modern interior doors.

OPEN TO DESIGN DIVERSITY.

SIMPLE LOOK. GREAT IMPACT.

Interior doors are a matter of course, often inconspicuous but nevertheless significant objects in the living room. Regardless of whether you want interior doors that harmonize with the interior or interior doors that draw everyone's attention - with Josko you have the choice in

both cases. Our modern and classic interior doors are available in many different models, types of wood and surfaces, opening up an extraordinary world full of new design options.

Classic interior doors.

BEAUTIFUL CLASSIC, CLASSICALLY BEAUTIFUL.

Natural wood floors

Quality you can see and feel.

We humans are more sensual than we think. And more sensitive than we imagine. Our inner balance is an reflection of our outer living environment and vice versa. A grounded person is someone who is good at life on both feet. If both partners do this in a partnership, like Josko and the wooden floor manufacturer Trapa, then something special emerges from the this partnership.

A whole collection of high-quality wooden floors has been created, which the quality producer Trapa produces exclusively for Josko. Four types of wood (oak, moss oak, terra oak and larch) from sustainable and regional forestry. Four plank collections (classic, premium, storico and emotion) in the calm, knotty, natural and wild knotty. Ten exquisite shades. The collection completes the Josko Smart Mix philosophy, which makes the complete ambience possible for holistic living harmony. Entrance doors, interior doors, windows, all-glass systems, floors, connecting interior parts such as stairs, panels, skirting boards: everything is

coordinated so that the individual elements together form a coherent overall composition in your personal living space. Tone in tone, entrance doors, interior doors and natural wood floors create a harmonious ensemble.

The wood comes exclusively from ecological forestry. The raw material is processed in St. Veit an der Glan (Carinthia), from sawn timber to ready-to-install planks of particularly high quality. In an elaborate process with three-stage drying and elaborate cutting, gluing and oiling techniques, refined nature is created as a supporting element of timeless vibrancy. The wood treatment not only has a superficial effect, but also deep into the pore and cell system. The depth effect ensures the particularly high quality of natural wood floors at every step: Aesthetics, dimensional stability, breathability, high impact sound insulation and resiliency, lifelong durability and easy maintenance.

Natural wood floors with character.

EXPERIENCE LIVING HARMONY AT EVERY TURN.

The secret of a pure natural wood floor is its naturalness. It gives off soothing warmth like no other floor. Its naturally grown wood structure gives it a unique liveliness, each plank seems to tell its own story. And over time, it finally gains its own, individual character, and it becomes a floor with personality.

A PURE NATURAL WOOD FLOOR

The natural wood floors from Josko are made of solid wood through and through. The wood is not only treated on the surface, but deep in the cell and pore system: partly with heat and pressure, partly with lye, depending on the desired colour. Then the treatment is carried out with a special natural crystal oil. Thanks to this in-depth, purely natural treatment, our natural wood floors are exceptionally durable and resistant.

NATURAL LIVING

A warm and comfortable feeling, full of life and in harmony with nature – a joy for the senses.

MADE FOR GENERATIONS

Durable, hard-wearing and timeless - an investment for life.

HARMONIOUSLY COORDINATED

With windows and doors in matching colours or combined with matching skirting boards, stairs and steps.

1

4 WOOD TYPES

Oak: the everlasting classic

Bog-look oak: with subtle colour variations

Terra oak: with a dark, elegant appearance

Larch: stripped in light colour, with a fine knotty look

2

4 GRADES

Design: even, knotty, natural and wild knotty

3

5 COLLECTIONS

Compact floorboard: economical & inexpensive

Classic floor board: elegant & sustainable

Storico floor board: with a vivid antique finish

Premium floorboard: for particularly high demands

Emotion: tangibly soft on the feet

4

11 SHADES

From classic/traditional to modern and elegant. 7 shades were exclusively designed to match the Josko product range

ADVANTAGES OF NATURAL WOOD FLOORS

HEALTHY FROM A BUILDING BIOLOGICAL ASPECT

Free from paints and harmful substances and only treated naturally, so that the wood can breathe and have a moisture regulating effect on the room air - for a sustainably healthy living climate.

GOOD FOR YOUR CONSCIENCE

A regional, high quality product from sustainably managed forests that can be completely composted even after several generations.

CLIMATE-RESILIENT AND NON-DISTORTING

Ideally suited for underfloor heating and also for controlled living space ventilation.

EASY TO CLEAN

All that's needed is regular vacuuming and occasional cleaning with a damp mop, preferably with some wood-floor soap – natural coconut and soy oil in the soap are a mild care.

IDEAL FOR ALLERGY SUFFERERS

Resistant against dirt and hygienic due to a natural deep treatment. Free from electrostatic charging and easy to clean.
